Pioneer Delofting Instructions

Step 1
With two or more people, remove the mattress, then the plywood platform, and set them aside. Unbolt the two bolts on each end of the front board that the plywood was sitting on.

Step 2
Take the small 1” board on its inside and install it in the middle two holes of the lower bed frame. There are two similar boards on the back of the loft, an upper and a lower.

Step 3
Unbolt the same board on the back that the plywood was sitting on. Switch this with the lower board because most lower boards do not have the 1” plywood support. Make sure to install the lower board up where the upper board was; both boards must be reinstalled.

Step 4
If you do not want the front wider board at the top of the bed, you may unbolt it and re-bolt it to the back of the bed frame. All bed frame parts must be reinstalled, with the loft frame parts on the top and the mattress in the middle of the lower frame. Lastly, make sure that all bolts are snug, but not over-tightened.

Caution
Avoid hitting a sprinkler head when moving items. Large volumes of water will flow out of the sprinkler head. Damage to the surrounding area will occur.

Do not use damaged parts or substitute parts. Damaged or missing parts can be replaced by contacting the information desk, or by submitting a Fix It request: housing.umn.edu/FixIt.
